

LOGAA PARAMESH L T

B.Tech — Computer Science (Specialization in Artificial Intelligence and Data Science)

8870496955 | parameshlogaa@gmail.com | Bengaluru, India | linkedin.com/in/logaa-paramesh-l-t | github.com/Fearoff5214

CAREER OBJECTIVE

Motivated Computer Science undergraduate specializing in Artificial Intelligence and Data Science, seeking an opportunity to apply hands-on expertise in Python, Java, SQL, and REST API development within a challenging and growth-oriented environment. Passionate about building scalable, secure, and intelligent software systems — from backend services and cloud-integrated applications to AI-driven security tools. Committed to continuous learning, clean engineering practices, and delivering meaningful impact through technology. Aiming to contribute to innovative projects in software engineering, data infrastructure, or cybersecurity while growing alongside a dynamic team.

EDUCATION

REVA University, Bengaluru — B.Tech, Computer Science (Specialization in AI & Data Science) | CGPA: 6.65 | Expected 2027

Aurobindo Vidhyalaya Sr. Sec. School, Dharapuram — HSC: 64% | SSLC: 67%

TECHNICAL SKILLS

Programming Languages: Python (primary), Java, C, JavaScript, SQL — proficient in writing clean, efficient, and maintainable code

Databases: MySQL, PostgreSQL, MongoDB — schema design, JOIN queries, indexing, query optimization; Oracle (familiar), SQL Server (familiar)

Infrastructure & Platforms: Linux/UNIX (command-line proficient), Git, GitHub, Postman, VS Code; AWS basics (EC2, S3); VMware (familiar)

Backend & APIs: FastAPI, REST API design, JSON, ETL concepts, Node.js, Express.js

Frontend & Reporting: React JS, HTML5, CSS3, JavaScript (ES6+); data visualization with Matplotlib, analytical tooling

Cloud & DevOps: AWS EC2/S3, Git version control, CI/CD concepts, containerization basics

Core Competencies: Analytical thinking, structured problem-solving, technical documentation, cross-functional collaboration

EXPERIENCE

Technical Team Head · Cybersecurity Club – REVA University Nov 2025 – Present

- Conducted panel discussions with cybersecurity industry experts — organized speaker sessions, moderated technical Q&As, and coordinated event logistics for the university community
- Led technical development initiatives and automation projects; managed team workflows, version control, and cross-functional coordination with faculty and external stakeholders
- Authored and maintained technical documentation covering system architecture, API designs, test procedures, and project learnings

PROJECTS

GST Compliance AI Platform · Python · FastAPI · MySQL · REST APIs · Docker

- Architected a Dockerized full-stack compliance platform with a Python/FastAPI backend, MySQL relational database, and REST API layer — managed database schema design, query optimization, and data pipeline integrity
- Implemented structured logging, error handling, and API documentation — demonstrating production-level software engineering practices applicable to application production support environments

AI-Based Intrusion Detection System · Python · Network Diagnostics · ML

- Developed a network intrusion detection pipeline in Python — designed modular data ingestion, preprocessing, ML inference, and alerting components with structured system logging and documented test procedures
- Relevant to Global Information Security and network reliability engineering — demonstrates ability to analyze network traffic data, identify anomalies, and produce structured analytical reports

LexMatch AI – Legal Research & Case Analysis Platform · Python · FastAPI · React · OpenAI · PostgreSQL · OCR

- Designed and built a full-stack AI-powered legal research platform enabling lawyers and researchers to upload case documents, extract structured text via Tesseract OCR, and retrieve semantically similar precedents using LLM-based embeddings and vector similarity search
- Implemented LLM pipelines using OpenAI API for three core use cases: case summarization (condensing lengthy judgements into structured briefs), legal document classification (categorizing by case type, jurisdiction, and subject matter), and semantic case matching (finding relevant precedents from a PostgreSQL-backed case corpus)
- Engineered prompt templates using few-shot prompting and output format constraints — ensured consistent, parseable JSON responses from the LLM across all three workflows, with fallback handling for ambiguous or low-confidence outputs
- Built a FastAPI backend exposing versioned REST API endpoints for document ingestion, classification, summarization, and search; developed a React frontend with document upload, search interface, and structured result display

AWARDS & CERTIFICATIONS

- Winner – Best Use of AI, JIT Hackathon, Bengaluru | Top 15 / 80 Teams – SJBIT Hackathon (Axiom), Bengaluru
- NPTEL – C Programming Certification | Full Stack Development Certification
